

Topic: Multiplying multivariable polynomials**Question:** Simplify the expression.

$$(x + 3y)(4x^2 + 2xy - 1)$$

Answer choices:

- A $4x^3 + 14x^2y + 6xy^2 - x - 3y$
- B $2x^3 + 24x^2y - 6xy + x - 3y$
- C $4x^3 + 12x^2 + 6xy + x - 3y$
- D $2x^4 - 6xy^2 - x + 3y$

Solution: A

When we multiply one polynomial by another, we need to make sure we multiply every term in the first polynomial by every term in the second polynomial.

$$(x + 3y)(4x^2 + 2xy - 1)$$

$$x(4x^2 + 2xy - 1) + 3y(4x^2 + 2xy - 1)$$

$$4x^3 + 2x^2y - x + 12x^2y + 6xy^2 - 3y$$

Rearrange the terms in descending order of powers of x .

$$4x^3 + 2x^2y + 12x^2y + 6xy^2 - x - 3y$$

Group like terms together, and then combine like terms.

$$4x^3 + (2x^2y + 12x^2y) + 6xy^2 - x - 3y$$

$$4x^3 + 14x^2y + 6xy^2 - x - 3y$$

Topic: Multiplying multivariable polynomials**Question:** Simplify the expression.

$$(3x + 3y)(x + y) + (x + y)(2x - 2y)$$

Answer choices:

A $5x^2 - 5y^2$

B $6x^2 - 6xy - 6y^2$

C $5x^2 - 5xy - 5y^2$

D $5x^2 + 6xy + y^2$

Solution: D

Since we're starting with

$$(3x + 3y)(x + y) + (x + y)(2x - 2y)$$

we can use FOIL on each pair of binomials.

$$[3x(x) + 3x(y) + 3y(x) + 3y(y)] + [x(2x) + x(-2y) + y(2x) + y(-2y)]$$

$$3x^2 + 3xy + 3xy + 3y^2 + 2x^2 - 2xy + 2xy - 2y^2$$

Rearrange for clarity, then group like terms together and combine like terms.

$$3x^2 + 2x^2 + 3xy + 3xy - 2xy + 2xy + 3y^2 - 2y^2$$

$$(3x^2 + 2x^2) + (3xy + 3xy - 2xy + 2xy) + (3y^2 - 2y^2)$$

$$5x^2 + 6xy + y^2$$

Topic: Multiplying multivariable polynomials**Question:** Simplify the expression.

$$(a + 2b - c)(a - 2b + c)$$

Answer choices:

A $a^2 - 4b^2 + 4bc - c^2$

B $a^2 + 4ab - 4b^2 + 4bc - c^2$

C $a^2 - 4ab - 4b^2 + 2ac - c^2$

D $a^2 - 4b^2 + 4ac - c^2$

Solution: A

If we start with

$$(a + 2b - c)(a - 2b + c)$$

then we can distribute each term in the first trinomial over each term in the second trinomial.

$$a(a) + a(-2b) + a(c) + 2b(a) + 2b(-2b) + 2b(c) + (-c)(a) + (-c)(-2b) + (-c)(c)$$

$$a^2 - 2ab + ac + 2ab - 4b^2 + 2bc - ac + 2bc - c^2$$

Rearrange for clarity, and then collect like terms.

$$a^2 - 2ab + 2ab - 4b^2 + ac - ac + 2bc + 2bc - c^2$$

$$a^2 - 4b^2 + 4bc - c^2$$
